

DS DOUBLE SELECTOR VALVE

The PRINCE valve model DS is a manual 6-way 2 position double selector valve. This valve will divert the flow going to two separate hydraulic circuits. For example two double acting cylinders or two reversible hydraulic motors can be operated by one four-way valve. When the double selector spool is pushed in, the C and D ports (top ports) are connected to the A and E ports (right ports). When the selector spool is pulled out, the C and D ports are connected to the B and F ports (left ports). An optional series/parallel spool is also available. This spool will run two reversible hydraulic motors in series when the spool is out and in parallel when the spool is pushed in.

DS KITS

PART NO.	DESCRIPTION
660590005	SEAL KIT
660170001	LEVER HANDLE
660170003	SPRING OFFSET
660170004	2 POSITION DETENT
660170010	END CAP KIT
