

Introducing The “**NEW**”

LSR-3060-3

RAPID Extend Log Splitter Valve

The “NEW” Prince LSR-3060-3 log splitter valve features a blazing fast “Rapid Extend” high speed mode. Our lab tests showed an average of 50% reduction in the amount of time it takes to get a fully retracted cylinder extended. The LSR has the added benefit of being specifically built to reduce system costs by working with single stage pumps. When extra force is needed, the LSR allows the user to manually shift from high speed mode to high force mode. This eliminates the need for a Hi-Lo pump and reduces the overall cost of a typical log splitter.

Standard Features

- Hydraulically balanced, hard chrome plated spool
- Handle can be installed in “up” or “down” position
- Extend flows of up to 25 GPM with inlet flows of 4 GPM
- Relief valve adjustable up to 3500 PSI
- Tandem center spool
- Manual shift from high speed mode to high force mode
- Spring center 4 position spool with soft stop between
- Pressure release detent on retract
